Full Stack Web Developer

Profile

A full-stack web developer passionate about learning new web technologies, solving complex problems, and building mobile and web applications.

Skills

Front-End: HTML5, CSS, JavaScript, jQuery, Ajax, Bootstrap, React, React Native
Back-End: Ruby on Rails, Node, Express
Databases: MySQL, PostgreSQL, MongoDB, ActiveRecord
Deployment & Development Tools: Heroku, GitHub, RSpec

Projects

Tripcast - <https://tripcast.herokuapp.com/>

Built as my final project for CodeCore's development bootcamp, Tripcast is a mapping program that forecasts the weather, gas prices, and hotel prices along a given route. Tripcast uses a simple Rails backend with JavaScript and jQuery on the front end. Tripcast uses the Google Maps, Amadeus Hotel, myGasFeed, and DarkSky APIs for the data.

Find My Pet - <https://findmypetapp2.herokuapp.com>

A web application that was created in a weekend in collaboration with Envisioning Lab's Test Tube program. The application helps owners find lost pets based on sightings reported to the website. Along with two other team members, I was responsible for creating and integrating the map components. Ruby on Rails, Javascript, jQuery, AJAX, and Google Maps API were the primary technologies used in creating the application, which was compiled together on Github.
